EDUCATION

Carleton University

Ottawa, ON

Bachelor of Software Engineering, Minor in Mathematics

Sep 2022 – Apr 2028

Relevant Coursework: Machine Learning, Database Systems, Data Structures, Object-Oriented Programming, Numerical Methods

PROJECTS

Sentinel AI – Smart Security Camera | Python, PyQt5, OpenCV, YOLOv8, face_recognition, OpenAI Realtime API, Raspberry Pi 5

- Built a modular nine-module Python application that turns a Raspberry Pi 5 into a smart doorbell camera, with face recognition, object detection, and a voice assistant powered by the OpenAI Realtime API.
- Designed a PyQt5 desktop app with a live camera feed, face enrollment dialogs, colour-coded real-time detection logs, and a settings panel, running camera processing on background threads to keep the UI responsive.
- Abstracted the capture layer to support both the Pi Camera and USB webcams, and wrote install scripts handling dependencies and desktop shortcut creation for one-command setup.
- Wired a Waveshare LCD over GPIO and developed remotely on the Pi over SSH and VNC.

UNO – Java Desktop Card Game | Java, Swing, MVC, Event-Driven Design

- Built a playable UNO game on a Model-View-Controller architecture, with a Swing interface, custom event objects broadcasting model changes to the view, and swappable light and dark card sets.
- Designed and implemented Timed Mode end to end on a team project: a per-turn countdown that auto-ends a turn when it expires, spanning menu integration, controller timer logic, model state transitions, and the live countdown in the view.
- Delivered the feature across staged milestones, keeping timer state in the model so game logic stayed independent of the UI.

EXPERIENCE

Carleton AI Society

Ottawa, ON

Vice President (previously Workshop Lead)

Jan 2026 – Present

- Plan and run the society's technical workshop series, and drive its ongoing rebrand.
- Designed and delivered workshops on AI history and CNNs, including a hands-on cats vs. dogs PyTorch classifier with a companion Colab notebook.
- Taught students with mixed technical backgrounds, breaking complex ML topics into approachable explanations.

InHouse Support

Ottawa, ON

IT Technician

May 2025 – Aug 2025

- Imaged and deployed client workstations on-site, standardizing OS builds, drivers, and software configuration across each rollout.
- Configured network hardware and troubleshoot connectivity at the router, switch, and endpoint level to diagnose faults under time pressure.
- Handled hardware repair and replacement, restoring failed machines and migrating user data with minimal downtime.

Federal Government of Canada

Ottawa, ON

IT Technician

May 2024 – Aug 2024

- Imaged, configured, and deployed workstations and mobile devices for 50+ employees, working through a ticket queue and triaging by impact.
- Diagnosed OS, hardware, and network issues across Windows and macOS endpoints, escalating what needed deeper infrastructure access.
- Documented fixes and walked non-technical staff through them in English and French, cutting repeat tickets for common issues.

SKILLS

Languages: Python, Java, C++, C, JavaScript, SQL, Racket, MATLAB, HTML/CSS

Frameworks & Tools: PyTorch, OpenCV, PyQt5, scikit-learn, Swing, React, Node.js, Git, Linux, Raspberry Pi, Google Colab

Technologies: Machine Learning, Computer Vision, REST APIs, Relational Databases, Embedded Systems

Spoken Languages: English, French, Arabic
